

**IN THE CLAIMS:**

Please amend claims 31, 32, 51, 52 and 55-56 and add claim 61 as follows.

1. - 30. (Cancelled)

31. (Currently Amended) A method comprising:

sending a request from one user equipment acting as a master equipment to at least one slave user equipment over a first communications network~~medium, preferably a short-range communications medium~~, said request prompting the user of the slave user equipment to send user information for group establishment in a second communications network;

receiving from the at least one slave user equipment ~~sending~~ a response comprising user information for group establishment, over the first communications network~~medium to the master user equipment~~;

creating by the master user equipment ~~creating or modifying~~ the group based on the information received in responses from the at least one slave user equipment, the group comprising the master user equipment and the at least one slave user equipment; and

sending by the master user equipment ~~sending~~ the information on the created or modified group to the second communications network for establishing thea communications group in the second communications network comprising user equipments; and

using the second communications network for group communication of the group.

32. (Currently Amended) A method of establishing a communications group in a communications network further comprising:

sending a request from a master user equipment to at least one slave user equipment over a first communications network medium, ~~preferably a short range communications medium~~, said request prompting the user of the slave user equipment to send user information for group establishment in ~~the~~ a second communications network;

receiving from the at least one slave user equipment ~~sending~~ over the first communications network medium a response comprising user information for group establishment ~~to the master user equipment for communication in the communication network~~;

creating by the master user equipment ~~creating or modifying~~ the group based on the information received in responses from the at least one slave user equipment, the group comprising the master user equipment and the at least one slave user equipment; and

sending by the master user equipment ~~sending~~ the information on the created ~~or modified~~ group to all members of the group over the second communications network medium.

33. (Previously Presented) A method according to claim 31, wherein at least one of the request or the response is one of the following: a multicast request, a point-to-point request, a short message request, an instant message request, an e-mail message request, a multimedia message request, a unified messaging message request, a Wireless Application Protocol message request or an Session Initiation Protocol message request.

34. (Previously Presented) A method according to claim 31, further comprising the master equipment, in creating or modifying the group, checking the response from slave user equipment and if the information of the slave user equipment is acceptable, adding the slave user equipment to the group.

35. (Previously Presented) A method according to claim 31, wherein the request comprises a file which guides the user of the slave user equipment to send only the information needed to establish the group to the master user equipment.

36. (Previously Presented) A method according to claim 31, wherein the request comprises a file which guides the slave user equipment to send only the information needed to establish the group to the master user equipment.

37. (Previously Presented) A method according to claim 31, further comprising retrieving, by the master user equipment, a file for the request from at least one of the communications network, from its memory, or from the slave user equipment.

38. (Previously Presented) A method according to claim 31, further comprising retrieving, by the master user equipment, a file for the request.

39. (Previously Presented) A method according to claim 31, wherein the communications medium is one of the following short-range communications media or networks: a circuit switched network, a packet switched network, a wireless local area network, an IrDA network, a Bluetooth medium or a network according to the IEEE 802.11 standards.

40. (Previously Presented) A method according to claim 31, wherein the communications network is one of the following networks: a digital mobile communications network, a circuit switched network, or a packet switched network.

41. (Previously Presented) A method according to claim 31, further comprising:  
before sending the request from the master user equipment to at least one slave user equipment, selecting by the master user equipment an identification to be used in the information interchange.

42. (Previously Presented) A method according to claim 31, further comprising sending the request by using multicasting.

43. (Previously Presented) A method according to claim 31, further comprising sending the request by using broadcasting.

44. (Previously Presented) A method according to claim 41, wherein the identification is an Mobile Station Integrated Services Digital Network number.

45. (Previously Presented) A method according to claim 31, further comprising sending, by the master user equipment, the request automatically when new user equipment enters a predetermined area.

46. (Previously Presented) A method according to claim 45, further comprising detecting entrance of a client or new user equipment into the predetermined area, sending the request over the communications medium at least in the proximity of the entrance point.

47. (Previously Presented) A method according to claim 45, further comprising sending the request periodically over the communications medium at least in the proximity of the entrance point to the predetermined area.

48. (Previously Presented) A method according to claim 31, further comprising deleting, by the master user equipment, user equipment from a group when the user equipment exits a predetermined area or after a predetermined period of time has elapsed.

49. (Previously Presented) A method according to claim 48, further comprising detecting exit of a client or user equipment from the predetermined area, sending an identification request over the communications medium at least in the proximity of the exit point, deleting a group member from the group on the basis of a response to the identification request, if any.

50. (Previously Presented) A method according to claim 31, further comprising sending, by the master user equipment or another device provided with the group information, advertisements to the group members over the communications network.

51. (Currently Amended) A Useruser equipment comprising a group communications capability, the equipment further comprising:

means for sending a request to at least one slave user equipment over a first communications networkmedium, ~~preferably a short range communications medium~~, said request prompting the user of the slave user equipment to send user information for group establishment for communication in a second communication network;

means for receiving from at least one slave user equipment over the first communications ~~network~~medium a response comprising user information for group establishment;

means for creating ~~or modifying~~ the group based on the information received in responses from the at least one slave user equipment; and

means for sending the information on the created ~~or modified~~ group to the second communications network for establishing said group.

52. (Currently Amended) A user~~User~~ equipment comprising a group communications capability, the equipment further comprising:

means for sending a request to at least one slave user equipment over a first communications ~~network~~medium prompting the user of the slave user equipment to send user information for group establishment;

means for receiving from at least one slave user equipment over the first communications ~~network~~medium a response comprising user information for group establishment;

means for creating ~~or modifying~~ the group based on the information received in responses from the at least one slave user equipment; and

means for sending the information on the created ~~or modified~~ group to all members of the group via the first communications ~~network~~medium.

53. (Previously Presented) User equipment according to claim 51, wherein the communications medium include one of the following short-range communications media or networks: a circuit switched network, a packet switched network, a wireless local area network, an IrDA network, a Bluetooth medium or a network according to the IEEE 802.11 standards.

54. (Previously Presented) User equipment according to claim 51, wherein the communication network is one of the following networks: a digital mobile communications network, a circuit switched network, a packet switched network, a wireless local area network, an IrDA network, a Bluetooth network or a network according to the IEEE 802.11 standards.

55. (Currently Amended) A communications system, comprising:  
a mobile communications network,  
a plurality of user equipment each including a group communications capability in the mobile communications network, and a transceiver for further communication over a first short-range communications-medium network, further comprising:  
at least one user equipment being configured to operate as master user equipment and to send a request to at least one slave user equipment over the first short-range communications network-medium prompting the user of the slave user equipment to send user information for group establishment in the mobile communications network;

at least one user equipment being configured to operate as slave user equipment and to send to the master user equipment over the first short-range communications network~~medium~~ a response comprising user information for group establishment;

the master user equipment being further configured to create ~~or modify~~ the group based on the information received in responses from the at least one slave user equipment; and

the master user equipment being further configured to send the information on the created ~~or modified~~ group to the mobile communications network for establishing said group.

56. (Currently Amended) A communications system, comprising:

a mobile communications network,

a plurality of user equipment each including a group communications capability in the mobile communications network, and a transceiver for further communication over a first short-range communications network~~medium~~, further comprising:

at least one user equipment being configured to operate as master user equipment and to send a request to at least one slave user equipment over the first short-range communications network~~medium~~ prompting the user of the slave user equipment to send user information for group establishment in the mobile communications network;

at least one user equipment being configured to operate as slave user equipment and to send to the master user equipment over the ~~short-range~~first communications ~~network~~medium a response comprising user information for group establishment;

the master user equipment being further configured to create ~~or modify~~ the group based on the information received in responses from the at least one slave user equipment; and

the master user equipment being further configured to send the information on the created ~~or modified~~ group to all members of the group over the ~~short-range~~first communications ~~network~~medium.

57. (Previously Presented) A system according to 55, wherein the short-range communications medium include one of the following short-range communications media or networks: a wireless local area network, an IrDA network, a Bluetooth medium or a network according to the IEEE 802.11 standards.

58. (Previously Presented) A system according to claim 55, wherein the master user equipment being configured to send the request automatically when new user equipment enters a predetermined area.

59. (Previously Presented) A system according to claim 58, wherein the master user equipment being further configured to delete user equipment from a group when the

user equipment exits a predetermined area or a predetermined time has elapsed from entering the member to the group.

60. (Previously Presented) A system according to claim 58, further comprising:  
a unit for sending advertisements to the group members over the communications network.

61. (New) A method according to claim 31, further comprising:  
modifying the group based on the information received in responses from the at least one slave user equipment; and  
sending by the master user equipment information on the modified group to the second mobile network.
